

Red Hawk Fire & Security

Industry: Construction and Service

Type of Vehicles: Commercial and Sales

Fleet Size: 800

Initial Company Challenges

More than 50,000 companies and institutions across North America rely on the resources and knowledge delivered by Red Hawk Fire & Security. The company provides a comprehensive set of advanced safety and security technologies that are custom designed to meet the specific needs of the businesses they serve. From a corporate perspective, management set a goal to service more customers in a day – which meant boosting employee productivity and customer satisfaction by going from 4 service tickets to 5.

The company also recognized the potential of improving driver behavior in an attempt to curtail accident rates. According to their fleet manager,

“We had a very high accident rate, which was most costly in our Northeast Region – and that needed to be corrected.”

Beyond improving driver productivity and safety, the company was also looking to reduce fuel consumption and spend by getting a better handle on the time vehicle’s spent idling.

Results and ROI

After performing extensive research to find the best telematics solution that would not only solve their current challenges, but also have the flexibility to adapt to their future needs – the company decided to go with Geotab. Approximately 400 out of the 800 vehicles were equipped with the Geotab GO™ device, giving management detailed visibility into the performance of each vehicle through MyGeotab™ – an easy to use, web-based fleet management software.

Since then [ticket times improved](#), and after 1 year the company still continues to be committed to working with dispatchers to become more effective. An unexpected benefit, as indicated by their fleet manager, was that “time sheet audits identified employees that were erroneously reporting work done for a full day, when they, in fact, were leaving the job site after only a few short hours of work.” Not only was Red Hawk Fire & Security able to [cut wasted overhead](#), but also the company was able to target the issues surrounding employee honesty and integrity at the workplace.

When it came to safety, Red Hawk Fire & Security [reduced accidents by 80%](#) in the Northwest Region. This was done in 2 ways: 1) monitoring risky driver behaviour and 2) taking corrective action on an as-needed basis. Today, the Northwest Region is at, or below, the accident level of other regions. Opportunities to make further improvements still exist, as most of the remaining accidents are with those managers and sales employees that do not currently have telematics devices installed in their vehicles. Due to the success they've had thus far, Red Hawk Fire & Security plans to roll out telematics to the remaining vehicles.

What's more, the company was also able to [drastically improve seatbelt use](#). The first day showed well over 250 incidents where a vehicle was in motion without the seatbelt fastened. After just 1 week of strong, persistent action, all employees were using their seatbelt.
