Fleet operations are under constant pressure to be more efficient while maintaining high industry standards – a challenge given today's rising fuel costs, dynamic road conditions, costly vehicle downtime, and questionable driver practices.

Assured Telematics Incorporated (ATI) is a leader in GPS fleet management, providing customized, cost-effective systems to companies large and small. What sets us apart from other fleet telematics providers is our engineering talent. ATI customers benefit from customized solutions on standardized platforms, integration with dozens of back-office services like SAP, and the ability to extend system capabilities over time with downloadable apps. What's more, ATI solutions transform complex system data into easily digestible reports that can be used immediately to improve operational efficiencies.

Customized solutions

Geotab is the North American leader in fleet management with a unique GPS measurement-based vehicle-tracking device, the GO6/7. ATI builds customized solutions around this trusted device to meet individual needs, giving customers **the advantages of a tailored solution with the benefits of a widely available platform**. Geotab and ATI offer continual technology development to safeguard customer investments for years to come.

Seamless integration

Integration with existing back-office software is critical to maximizing the benefits of fleet management systems. **ATI has industry-leading engineering capability**, decades of telematics experience, and dozens of integration partners to ensure telematics systems and back office programs work smoothly together. We eliminate the manual effort of mining data, ensure the immediacy of information, and reduce any chance of error.

Simplified reporting

Fleet telematics systems generate mountains of driver, route, and vehicle data. ATI solutions take these overwhelming and complex inputs to produce detailed analysis on real-time activities and historical records. **Reports are highly visual and instantly readable** with simple tables, charts, maps, and more, **tailored to each customer's unique needs and goals**.

Growth capabilities

Fleet telematics systems, like everything, must evolve as technology progresses and companies grow. ATI uniquely provides a powerful service to ensure customer solutions are expandable as needs change — **an app store with downloadable apps**. This ensures new capabilities are continually available for instant upgrades and expansion. Moreover, **custom-made apps**, installed hassle-free with the click of a button, are one of the hallmarks of an ATI solution.

- Notify drivers with configurable in-cab alerts for timely behavior correction
- Identify excess fuel users and safety compliance issues with driver score cards
- Get instant reports via email on vehicle health issues with real-time diagnostic reporting
- Monitor additional mounted power equipment with optional sensor interfaces
- Track all activities and exceptions to time and location with real-time breadcrumbs
- Monitor PTO usage for driver productivity and fuel consumption
